

# Blood extension activity sheet

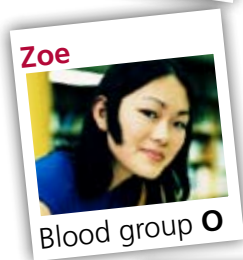

## Matching blood donors and patients

**1** Draw lines to connect donors to patients.

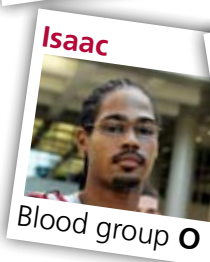

There are several ways to do it. But you must find a way that every patient gets the blood transfusion they need, otherwise they will die.

*And remember! A patient must be given blood from a donor with the right blood group.*

### The five donors:

### The five patients in need of a blood transfusion:

Janice has sickle cell anaemia.  
Which part of the blood do you think she needs?

---

He has haemophilia. This disease that affects his blood's ability to clot.  
Which part of the blood do you think he needs?

---
